Oregon State Fire Marshal

**COMMUNITY
RIGHT TO KNOW**

**What is a
Hazardous
Substance and
What is in My
Community?**

Oregon Community Right to Know (CR2K)

Who is required to report?

Any company or government agency with a reportable quantity of a hazardous substance or identified by the Oregon State Fire Marshal (OSFM) as having the potential of using, storing, manufacturing, or otherwise possessing hazardous substances stored onsite for more than 24 hours, is required to report.

What is a hazardous substance?

As it relates to the Oregon Community Right to Know and Protection Act, a hazardous substance is:

- Any substance that is required by Oregon OSHA to have a Safety Data Sheet (SDS). Defined by: OARS 837-085-0040 (31 a-c)
- Any substance, including radioactive material or any waste substance, that presents a physical or health hazard to employees, first responders or the public.

What does OSFM do with the information collected?

The information collected is provided to emergency planners and responders within your local community to assist them with preparing for and responding to hazardous substance incidents. The information is also available to the public to inform and familiarize surrounding communities about hazardous substances in their area.

Did you know?

In 1985, Oregon passed the Community Right to Know (CR2K) and Protection Act (ORS 453.307 to 453.414). One year later similar federal mandates took effect known as the Emergency Planning and Community Right to Know Act (EPCRA) of 1986.

Oregon Revised Statutes (ORS) directs OSFM to survey companies and government agencies about hazardous substances stored at their location. Facilities with reportable quantities (RQ's) must complete an annual Hazardous Substance Inventory Report by March 1 of each year.

How can you find out what Hazardous Substance are in Your Community?

The OSFM CR2K program provides an on-line tool called CHS Manager through our website located at:

<https://oregon.hazconnect.com/Account/Login.aspx>

We also have a searchable database for hazardous substance incidents located at:

<https://www.oregon.gov/osfm/industry/Pages/hazmat-incident-search.aspx>

If you are unable to find the information you are looking for, a Public Information Request can be submitted by completing the Request Form located at:

<https://www.oregon.gov/osfm/Pages/public-records-request.aspx>

Knowledge Is Power

The OSFM CR2K Program's duty is to provide the general public with hazardous material information provided by Oregon facilities. We work with facilities to assist them with reporting current and accurate data, and provide this information to emergency responders, emergency planners, and health officials.

Without up-to-date information, emergency responders, and health officials are unable to fully prepare for potential hazardous substance incidents. Likewise, the general public can use information about what hazardous substances are present within local communities so they can prepare for a potential incident involving those hazardous substances.
